

MATT PINE

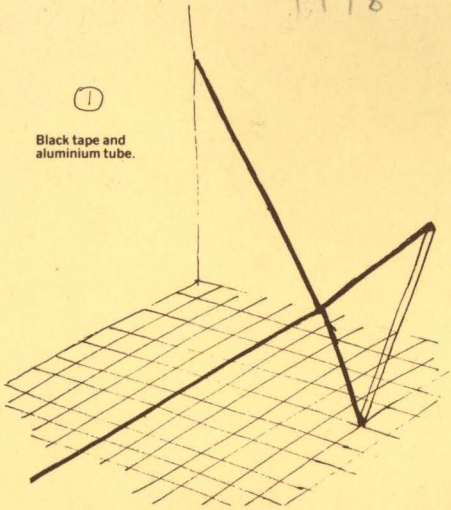

PLACEMENT PROJECTS

Auckland City Art Gallery

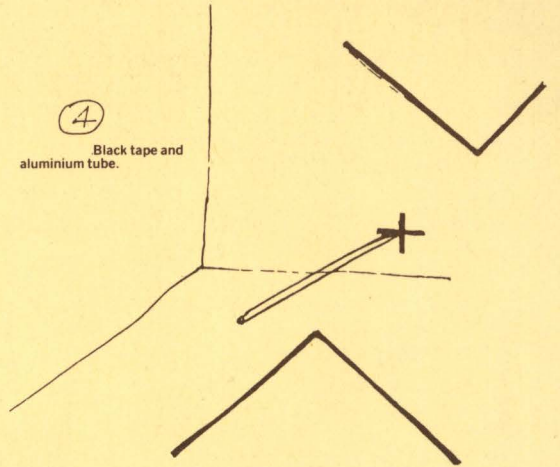

BIB 18 5031
1978

①
Black tape and
aluminium tube.

All ideas here would come under a general term **PLACEMENT PROJECTS** using actual objects and line (wood, steel, wire, plaster, metal tube, tiles, plastic tape, concrete block, corrugated plaster and/or metal sheet). The works used juxtaposition of objects and line in space in relation to the floor, walls, ceiling, or external geographical features. Final form of works could be modified.

④
Black tape and
aluminium tube.

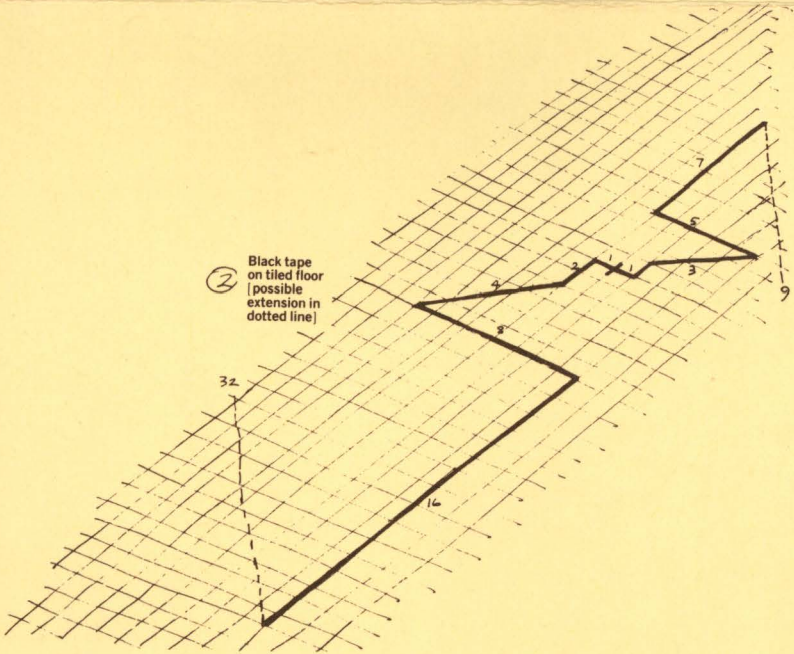

Most of the six pieces shown here relate to the floor (tiles, either line or size of individual tiles) and walls, one tile in some cases being the unit of measurement.

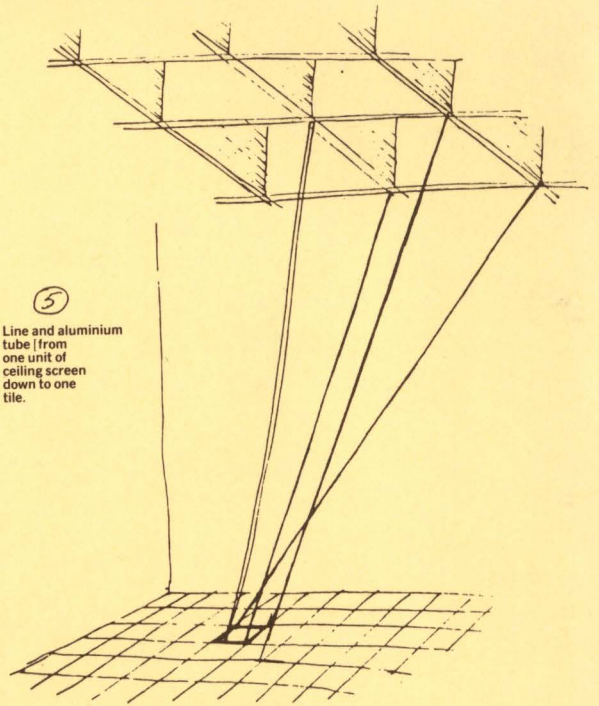

The following are for internal placement:-
[Works numbered actually installed]

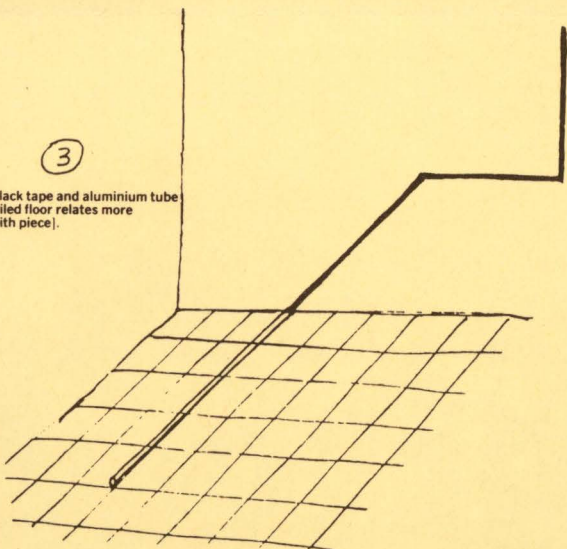

②
Black tape
on tiled floor
[possible
extension in
dotted line]

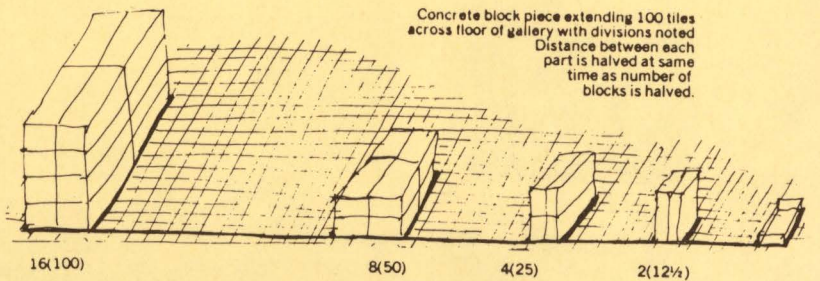

⑤
Line and aluminium
tube [from
one unit of
ceiling screen
down to one
tile.

③
Black tape and aluminium tube
[tiled floor relates more
with piece].

⑥
Concrete block piece extending 100 tiles
across floor of gallery with divisions noted
Distance between each
part is halved at same
time as number of
blocks is halved.

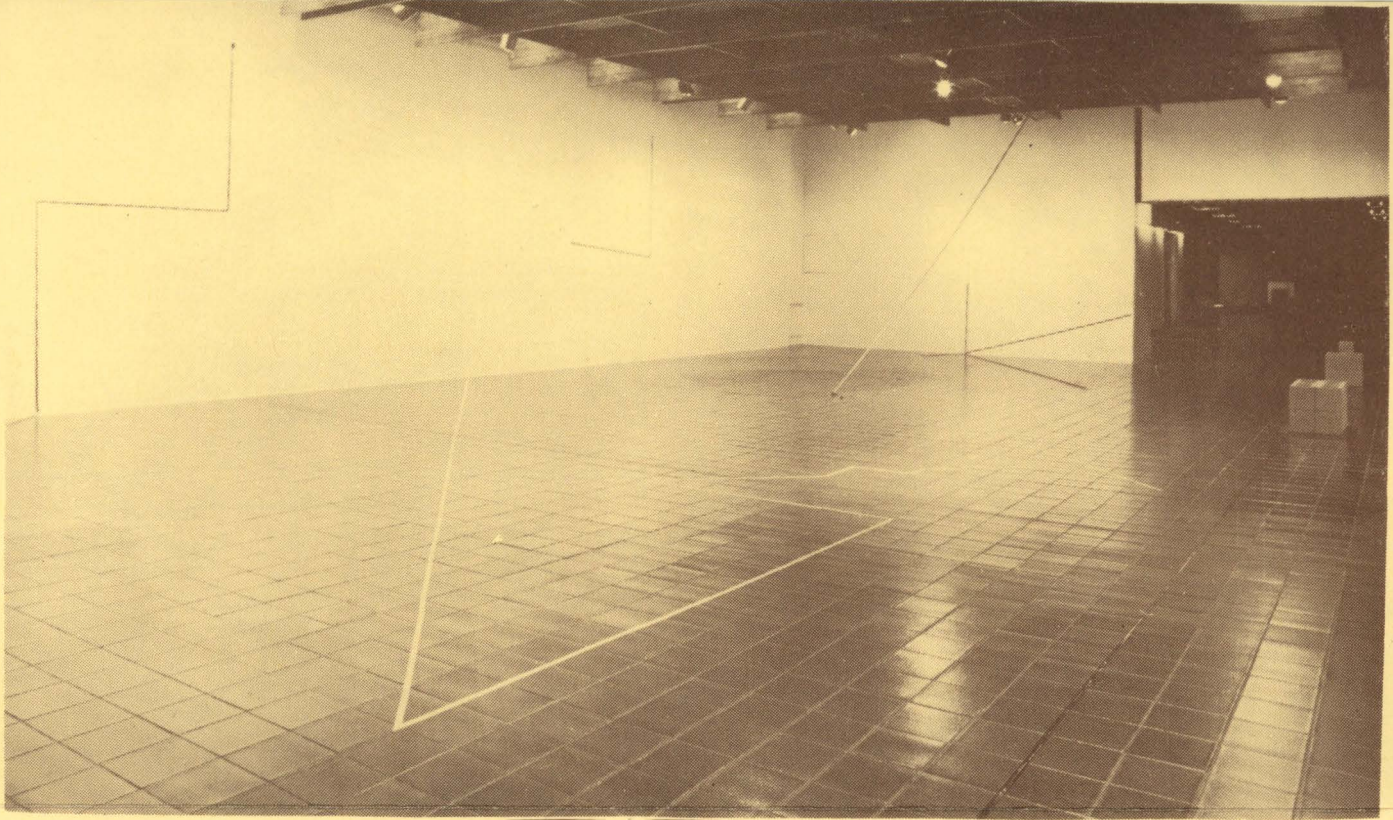

16(100)

8(50)

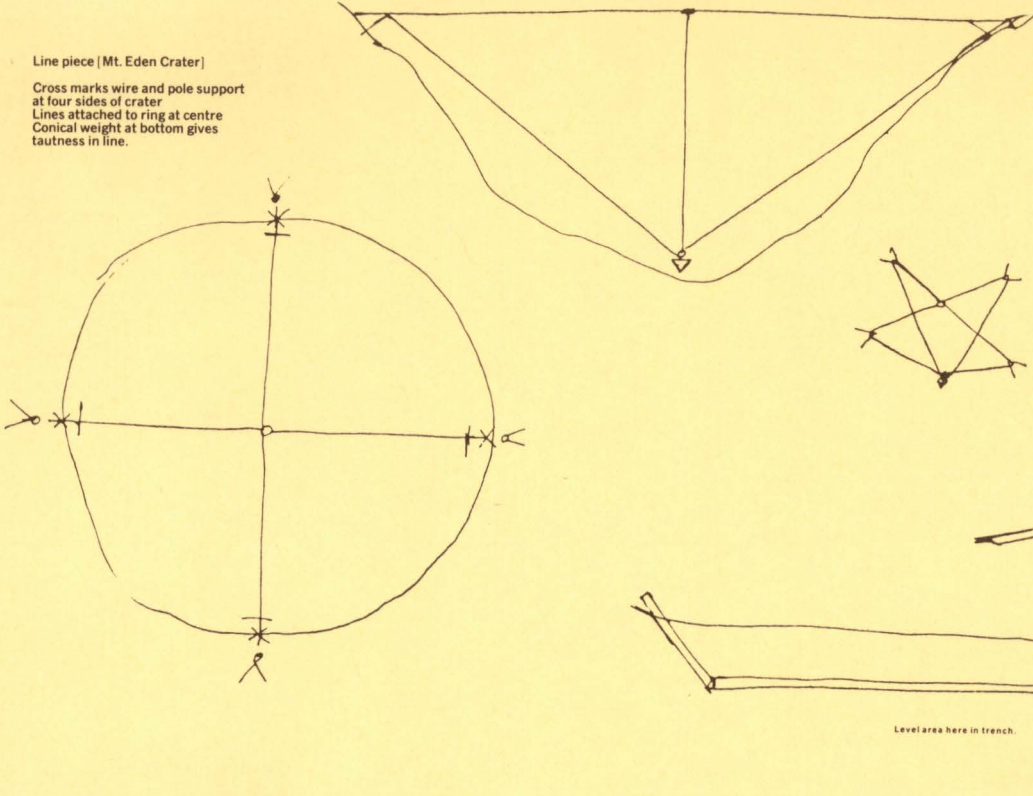

4(25)

2(12½)

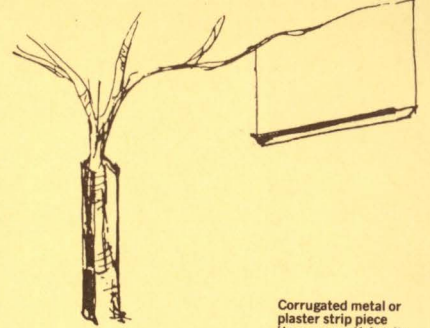

Line piece [Mt. Eden Crater]

Cross marks wire and pole support at four sides of crater
Lines attached to ring at centre
Conical weight at bottom gives tautness in line.

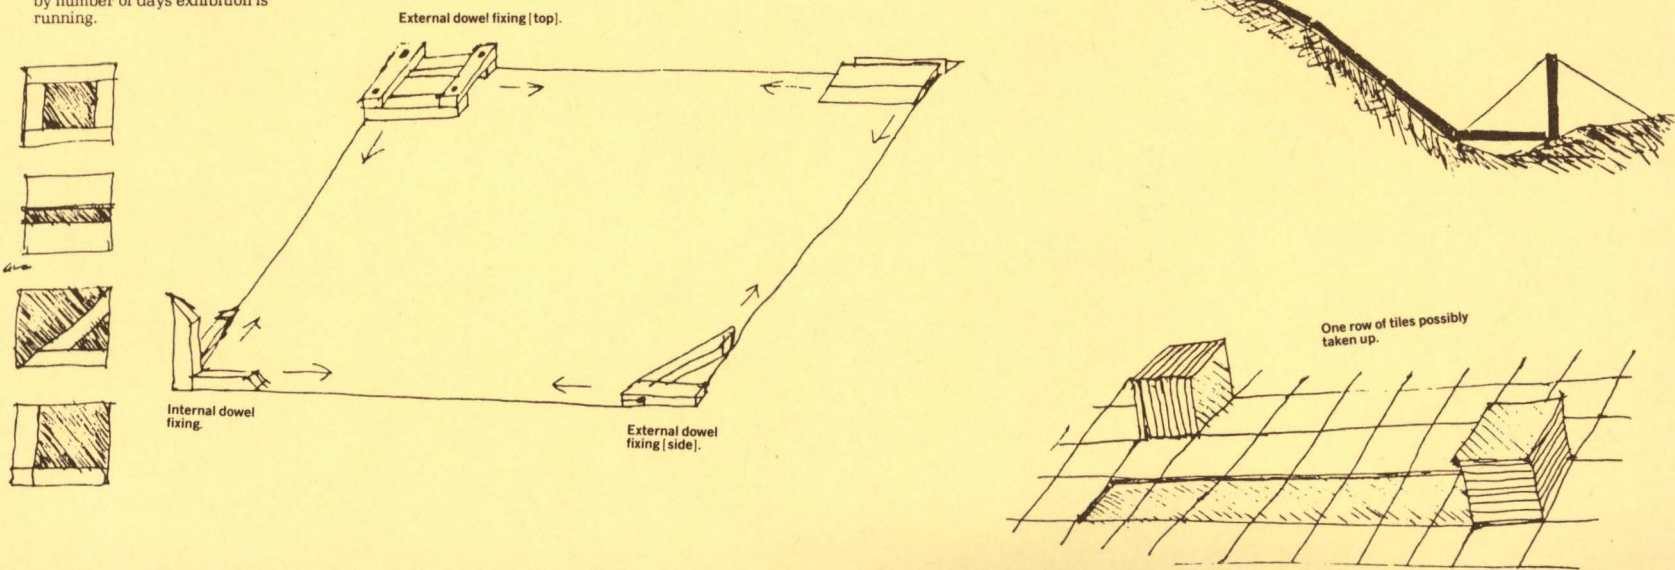

Unrealised works

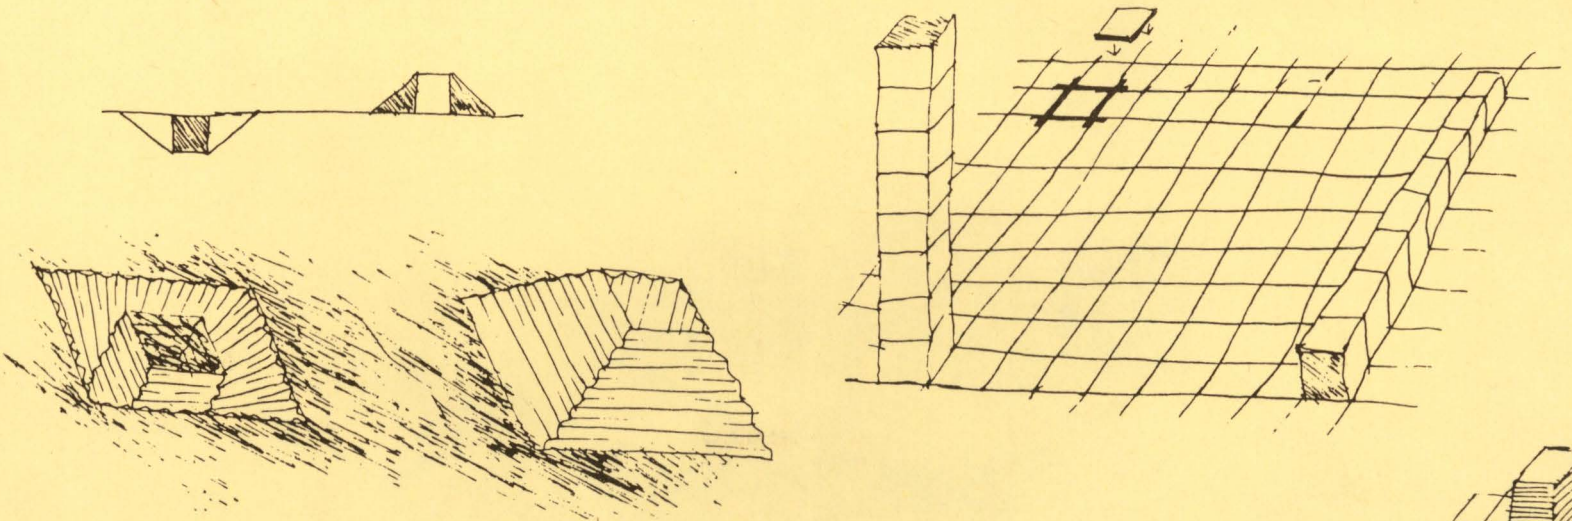

Corrugated metal or plaster strip piece [tree support] 4 units

The following piece consists of a number of units (4) placed at each corner of a square grid, the size to be determined at a later date. Each unit is a different form and delineates the outer edge of square. A possible variation of piece is to move each unit every day to change configuration, eventually arriving at original layout at end of exhibition. Thus, size of grid would be determined by number of days exhibition is running.

Black tape or tile tube and wood blocks or possibly just blocks.

Equivalent weight of tiles, concrete, steel and possibly wood.
